

Procurement Transparency in Lamia: Executive Summary

Analysis of Diavgeia public procurement records, 2020–2026

Data: Diavgeia OpenData API · Coverage: search exports + targeted detail hydration

Verified: May 2026 – complete analysis with ANAΛHΨH cross-check and supplier identification

This analysis covers six years of public procurement records (2020–2026) for three public entities in Lamia – the General Hospital (ΓΝ Λαμίας), the municipality (Δήμος Λαμίας), and the water utility (ΔΕΥΑ Λαμίας) – cross-validated against peer institutions of comparable size in Trikala, Karditsa, Kozani, and Serres.

****The core finding is not a single anomaly but a structural pattern:**** all three Lamia entities independently show elevated direct-award frequency. The most analytically clean signal is the hospital's ****competitive award (KATAKYPOΣH) count: 407 at ΓΝ Λαμίας versus 1,991 at the comparable ΓΝ Τρικάλων**** – a ****4.9× inversion**** (local data 2020–May 2026; confirmed against Diavgeia API), robust to any classification ambiguity. The root cause at the hospital is identified: a labour model that outsources cleaning, catering, and security to external contractors (€7.34M = 44.9% of the 2024 budget), versus ΓΝ Τρικάλων which employs these staff directly. The two hospitals spend almost identically per capita (€244 vs €246), but the outsourcing model generates large recurring service contracts requiring competitive tendering – and when those tenders fail or stall, incumbents entrench.

Six Documented Findings

****1. Hospital outsourcing incumbency (UNISON).****

The hospital's cleaning contract has been held by UNISON (Metlen Energy & Metals subsidiary, AFM 094081864) since October 2020. A €4.4M international open tender for cleaning services was launched in March 2023 and failed twice – both publications suspended before their bid deadlines by preliminary appeals filed by UNISON and a competitor (IFS IPIROTIKI, GAK 1094/1095, 17 Jul 2023). Four ΕΑΔΗΣΥ consents then authorised a negotiated procedure (Art. 32 § 2γ L.4412/2016). UNISON was formally awarded the negotiated contract in July 2025 (ADA `ΨΠΗΓ4690BM-AK8`, €680,859 for 5 months), with the award published four months late in November 2025 – a breach of Art. 3 § 3 L.3861/2010. A parallel competitive tender has a provisional winning bid of ****€1.632M**** from 3G FACILITIES-SERVICES AE (ADA `9M604690BM-ΣΥ6`) – essentially identical to UNISON's negotiated rate, confirming the negotiated price was market-consistent. The documented concerns are: (a) 4-month publication delay; (b) misclassification as Δ.1 (should be Δ.2.4); (c) five-year incumbency during a period when no competitive process produced a winner; (d) total 2025–2026 UNISON commitment: ~€3.2M. Peer comparison: ΓΝ Τρικάλων pays ****€800,382/year**** (CPV 90911200–8, competitively tendered, ΓΕΝ ΚΑ ΑΕ ΑΦΜ 094510036, ADA `ΨΕΗΠ46907Φ-Ψ6Φ`) – ****2.0× cheaper per bed**** for the same service.

****2. Hospital security cost escalation and staffing model.****

Security guard services (CPV 79713000–5) cost ~€361k/year (excl. VAT) during the 2020–2021 bridge contracts (KOLOSSOS SECURITY, 17 FTE). The current contract (ΗΦΑΙΣΤΟΣ ΕΠΕ, ΑΦΜ 999436428, Heraklion, 2024–2026) runs at ~€529k/year excl. VAT (€656k/yr incl. VAT, €1,968,000 for 3 years) – a ****+47% rate increase**** from the baseline. The driver is a staffing increase from 17 FTE to 29 FTE (+71%) committed in the 2023 tender specifications (ADA `6B084690BM-464`): 21 concurrent 8-hour shift-slots per day, requiring 28+1 FTE. No clinical or operational justification is documented. At €656k/year and 307 beds, the per-bed cost is ****€2,136/bed/year – 2.9× to 4.4× the peer range**** (ΓΝ Τρικάλων ~€145.8k/yr = €486/bed; ΓΝ Καρδίτσας ~€197k/yr = €741/bed). The 2024 tender attracted 2 bidders (ARGOS SECURITY and ΗΦΑΙΣΤΟΣ); the 2021 tender attracted 6 bidders – the market is contested, but the current staffing specification limits effective competition.

****3. Municipality: above-threshold security contracts without competitive tender.****

The municipality directly awarded building security guard contracts above the €30,000 legal threshold in 2022 (two contracts totalling ~€148k: ΚΟΥΤΚΙΑΣ & ΣΙΑ ΕΕ ΑΦΜ 801089930 in July, ADA `6ΓΕΠΩΛΚ-05H`; ΚΟΥΤΚΙΑΣ Παναγιώτης ΑΦΜ 112437726 in August, ADA `ΨΜΛΔΩΛΚ-ΘΙ0`) and 2023 (€74,400, ADA `ΠΒΥΘΩΛΚ-T4K`). No competitive tender was ever published for building security across the full 2020–2026 dataset. The same family entity also appears in a contract

fragmentation pattern (two identical €24,435 same-day security awards, 8 April 2020). Peer municipalities show zero above-threshold direct awards for building security. Total KOYTKIAS security contracts: ~€222k above threshold, zero competitive process.

****4. Municipality: contract fragmentation by geographic splitting (Δ.Ε.).****

Rolling 60-day window analysis of all 10,388 ΑΝΑΘΕΣΗ decisions identifies 33 suppliers receiving combined awards that exceed the €30k threshold, while each individual award is kept below. The most systematic: AFM 800458127 (electrical materials, €420k across 34 awards in rolling windows); AFM 112437726 (KOYTKIAS security, same-day identical awards); AFM 801793425 (single above-threshold award of €37,195). Splitting contracts by Δημοτική Ενότητα to stay below threshold violates Art. 6 § 2 of Law 4412/2016.

****5. ΔΕΥΑ Λαμίας: volume anomaly, but no concentration.****

The utility issues ****14.1× more**** direct awards than comparable peer utilities (ΔΕΥΑ Τρικάλων 262, Κοζάνη 196, Καρδίτσα 148 → avg 202; ΔΕΥΑ Σεργίων excluded as non-comparable). However: all 310 identified suppliers are dispersed (highest-frequency supplier: 17 transactions / ~€14k total over six years); the average transaction value is ~€3,500; dominant categories are maintenance and consumables. The data supports a procurement culture that defaults to direct awards rather than framework agreements, but does ****not**** support directed spending to specific contractors. ΔΕΥΑ publishes 4,680 ΑΝΑΛΗΨΗ ΥΠΟΧΡΕΩΣΗΣ decisions – fully comparable with peers, no Diavgeia non-compliance.

****6. Hospital H/M maintenance: sole-bidder incumbency (ΙΝΤΕΡΚΑΤ).****

The €2.46M electromechanical maintenance contract (CPV 50710000-5, ΕΣΗΔΗΣ 345751) was won in November 2024 by ΑΦΟΙ ΠΑΠΑΪΩΑΝΝΟΥ ΑΤΕΒΕ (ΙΝΤΕΡΚΑΤ ΑΕ, AFM 999917261, Γραβιά, Φωκίδα) – the ****only remaining bidder****, having held the contract since at least 2018. The 2021 tender (ΕΣΗΔΗΣ 95109) also produced a sole-bidder result. ΙΝΤΕΡΚΑΤ's primary ΓΕΜΗ-registered activities are quarrying and mining (61 registered KADs, zero covering building H/M maintenance – verified May 2026); it qualifies by borrowing technical credentials from subcontractors under Art. 78 L.4412/2016. Two consecutive competitive tenders producing the same sole bidder, across a 7-year incumbency, is the strongest example in the dataset of a recurring high-value contract awarded without effective price competition. Contract value grew from ~€889k/yr (pre-2020) to €820k/yr excl. VAT (€983k incl. VAT, 2024). No peer hospital outsources H/M building maintenance to a single contractor at scale.

What the ΑΝΑΛΗΨΗ Cross-Check Establishes

All 20,283 budget commitment decisions (ΑΝΑΛΗΨΗ ΥΠΟΧΡΕΩΣΗΣ, 2020–2026) for ΓΝ Λαμίας were hydrated and analysed by KAE expenditure code. The apparent 2.4–5.1× gap between ΑΝΑΛΗΨΗ totals and official payments is fully explained by: (a) centrally-funded payroll commitments (KAE 1312 alone: €24.6M in 2024, exceeding the hospital's entire own-resource payment total); (b) multi-year contract pre-reservations committed in the signing year. ****No undisclosed commitments. No anomalous gaps. Financial statements confirmed by this independent source.****

What Is Not Established

The ΑΝΑΘΕΣΗ count divergence at ΓΝ Λαμίας (5,887 vs 220 for ΓΝ Τρικάλων) reflects a classification difference as much as a procurement behaviour difference: ~739 entries are committee steps within competitive processes, coded as ΑΝΑΘΕΣΗ by hospital administrative practice. The defensible direct-award figure is approximately €82.3M (patient-specific and small procurement entries). The defensible comparative metric is the ΚΑΤΑΚΥΡΩΣΗ count (4.9×), not the ΑΝΑΘΕΣΗ count (27×).
